

ECCE12 picks renaissance theme

THE theme for the 12th European Congress of Chemical Engineering (ECCE12), due to be held in Florence, Italy, will be “Bridging Science with Technology, a Renaissance in Chemical Engineering”.

The event takes place from 15–19 September, and is organised by Italian Association of Chemical Engineering, under the auspices of the European Federation of Chemical Engineering and the European Society of Biochemical Engineering Science (ESBES).

As well as classical topics such as process simulation and reactor design, the organisers are also focussing on topical and future applications including nanotechnology, biofuels and biocatalysts. The event will include six plenaries, 12 parallel and three poster sessions, six symposia, and one student session.
