

**Solange I. Mussatto** is Head of Research Group at the Technical University of Denmark, Novo Nordisk Foundation Center for Biosustainability. She has been working for 20 years in the areas of Biomass Conversion and Bioprocess Technology. Her work consists in using chemical engineering and biotechnology tools to create innovative solutions that can accelerate the development of a bio-economy with potential environmental, economic, and social benefits. Currently, her group conducts research in various projects aiming at the development of efficient and sustainable process technologies to convert biomass into valuable products, including aspects of pretreatment, fermentation, evolutionary engineering, downstream and techno-economic assessment (see more details at: [BCBT group](#)). The importance of her research is highlighted in more than 140 full papers published in high quality peer-reviewed journals, 3 patents, several book and chapters, and many international awards. She has also been involved in many international research advisory panels and has given more than 40 plenary, keynote, and invited lectures at international conferences and universities around the world. She is Editor-in-Chief of the journal *Methods X - Agricultural and Biological Science*, Associate Editor of *Biomass & Bioenergy* and *Brazilian Journal of Microbiology*, and Advisory Editor of *Biofuel Research Journal*.
